*SSC*  
Completed in 2016

### About Me

"I'm a Full Stack Developer skilled in both front-end and back-end development. Proficient in Java, HTML, CSS, and Basic knowledge in JavaScript, with extensive experience in frameworks like Spring and Hibernate. Adept at crafting user-friendly interfaces and building robust, scalable applications that prioritize exceptional user experiences."

### Project's

#### Quiz Game

- Technologies used: JAVA & SQL.
- A simple quiz app which contains set of multiple-choice question questions with Bookmark feature

#### Employee Record Management System

- Technologies used: JAVA & MySQL
- Automated Employee Data: It's a Java-based system designed with a graphical interface (GUI) to efficiently store and manage employee details.
- Java & MySQL: Java serves as the programming language to build the system's functionalities, while MySQL is utilized as the database for storing employee records.
- Data Storage: This system captures and maintains comprehensive employee information, including personal details, job roles, and possibly performance metrics.
- This system essentially automates the process of managing employee information using a Java-based application with a MySQL database, ensuring a user-friendly experience to handle employee records effectively.

### Certification

Full Stack Developer in java
